

Protect your Subsea Tooling

The HC2W-CV2W-1 Valve Housing is a dedicated solution providing a stable and well-defined output pressure for your tooling system, regardless of pressure inlet settings of the ROV valve pack.

The HC2W-CV2W-1 is the new compact miniBOOSTER Valve Housing, designed to be mounted directly on your HC2W stainless steel intensifier.

Additional benefits are:

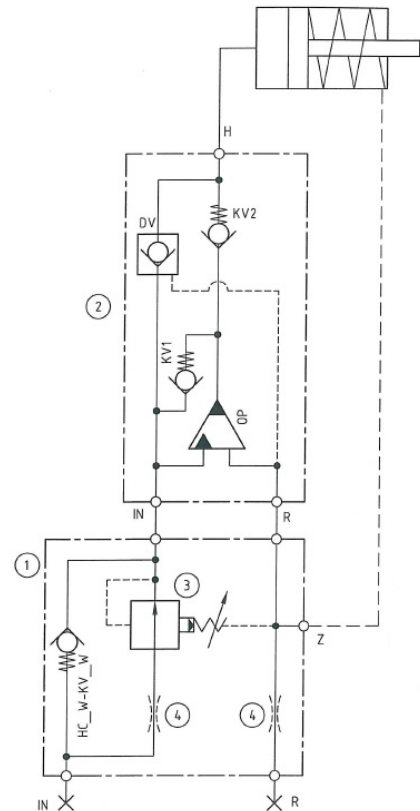

- Protect the tooling from excessive flows and pressures.
- Stabilize the pressure and force, regardless of pressure changes in Tank line.

The integrated pressure reducing valve is tank line compensated, and ensures that pressure to your booster IN port is well-balanced for pressure changes in tank line.

Main valve	Standard materials
Valve Housing	316L Stainless steel
Pressure Reducing Valve	External Stainless steel
	Internal coated steel

The HC2W-CV2W-1 is supplied tested, preset and locked from miniBOOSTER, so any damage for misuse with the settings will be easily identified.

Please have a look at the systems: www.minibooster.com.
