

Mobile

miniBOOSTER is commonly used to supply high pressure to attachments where small cylinders and high force are required.

The miniBOOSTER can utilise the low- pressure vehicle hydraulic system to supply high pressure to operate high- pressure tools, compared to using expensive high- pressure pumps with flexible hoses.

Our intensifier systems make use of full pump pressure. It provides up to 350 bar from the carrier and a bypass full pump flow up to 400 L/ min, which secures a very high efficiency.

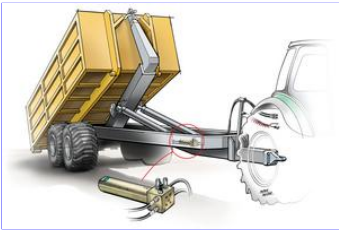

Have a look at some **well- proven applications:**

Crusher bucket mobile

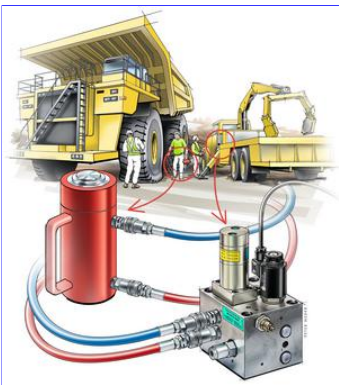

Demolition

Hook lift trailer

Excavator

Hydraulic jack mobile
